

TIS
INCIDENT REPORT

Project: TIS		Incident Number/Reference: 050	
DESCRIPTION (data and sequence of actions leading to fault, details of actual and expected response)			
<p>On trying to install the TIS on an NT 4.0 machine there were problems with the console intialisation. The Win32 call to reset the console size to 80x30 characters failed this caused the application to close the console completely leaving a system with no console and thus no output.</p>			
Found in test: NT Installation			
Supporting documentation attached		YES/NO	Continued YES/NO
Found during: (use actual project stages)		Reqs /Sys spec/Security Spec/Proof of Spec/Formal Design/INFORMED Design/Proof of Design/Code/Code Proof/Integration/Sys test/Acceptance (User Manual)

EVALUATION (include list of items affected, details of work required, other similar faults, tests to be re-run)			
<p>In the code it would be more practical if simple failures to reset console parameters did not cause the console to be killed. A system fault can still be logged if a failure is detected but the console should be allowed to remain. This would prevent minor failures from leaving an unaccessible application.</p> <p>Further, the reason for this fault was that the window size was being set before the underlying buffer size and the window cannot be larger than the buffer. Similarly the buffer size cannot be smaller than the window so simply reordering the calls will not always work.</p>			
P.t.o.		Continued	YES
Classification:		Critical / Major / Minor / Interfaces / Test / No Fault

screen-interface.adb	1.2 → 1.4		
		Continued	NO

EVALUATION *continued*

The solution is to perform the following actions:

1. Obtain the current window size (this will ^{be} no bigger than the buffer size).
2. Set the buffer size to the window size except if a window dimension is less than required use the required window dimension (the buffer will now be at least 80x30 but could be larger).
3. Set the window size to 80x30
4. Set the buffer size to 80x30.
