INCIDENT REPORT

Project: TIS		Incident Number/Reference: 044	
<b>DESCRIPTION</b> (data and sequence of actions leading to fault, details of actual and expected response)			
<p>The software currently has the SPRE device name hardwired – this is a nuisance since SPRE have now relocated their driver twice. It would be better to hold an internal default and allow the device (and ports) to be configurable on the command line.</p> <p>Futher there is no indication that the reason TIS fails to start is the SPRE drivers not connecting.</p> <p>Found in test:</p> <p>Supporting documentation attached      YES/NO      Continued      YES/NO</p>
